Window

C `trl + shift + enter` Open a new window

C `trl + shift + w` Close a window

C `trl + shift + ]` Move to the next window

C `trl + shift + [` Move to the previous window

IV. Spell correction

Vim comes inbuilt with a spell checker since v7. NeoVim is based on Vim and has the same functionality.

Run the command:

```
:setlocal spell spelllang=en_us
```

Here are some useful commands:

```
]s  " Move to the next misspelt word
[s  " Move to the previous misspelt word
z=  " Provide suggestions (you can entire the suggestion ID and enter to replace the word)
zg  " Add a word to the dictionary
```
